SAFETY MOMENT

AUGUST – BEES, WASPS AND HORNETS:

Bees, wasps, and hornets are most abundant in the warmer months. Nests and hives may be found in trees, under roof eaves, underground or on lawn equipment. During the hot months, it is extremely important to scan for hazards before you start.

You should take the following precautions to prevent insect stings:

- Wear light-colored, smooth-finished clothing.
- Avoid perfumed soaps, shampoos, and deodorants. Don't wear cologne or perfume.
- Avoid bananas and banana-scented toiletries.
- Wear clean clothing and bathe daily.
- Remain calm if a single stinging insect is flying around.
- If a bee comes inside your vehicle, stop the car slowly, and open all the windows.
- If you have a history of severe allergic reactions to insect bites or stings should carry an EpiPen and wear a medical identification bracelet or necklace stating the allergy.

If you are stung by a bee, wasp, or hornet:

- Have someone stay with you to be sure that they do not have an allergic reaction.
- Wash the site with soap and water.
- Remove the stinger using gauze wiped over the area or by scraping a fingernail over the area. Never squeeze the stinger or use tweezers.
- Apply ice to reduce swelling. Carry an ice pack in your first aid kit.
- Do not scratch the sting as this may increase swelling, itching, and risk of infection.
